COMMUNITY FORESTRY IN THE UNITED STATES

*Learning from the Past,
Crafting the Future*

By Mark Baker and Jonathan Kusel

Across the United States, people are developing new relationships with the forest ecosystems on which they depend, with a common goal of improving the health of the land and the well-being of their communities. Practitioners and supporters of what has come to be called community forestry are challenging current approaches to forest management as they seek to end the historical disfranchisement of communities and workers from forest management and the all-too-pervasive trends of long-term disinvestment in ecosystems and human communities that have undermined the health of both.

COMMUNITY FORESTRY IN THE UNITED STATES (Island Press, January 2003, Cloth: \$50.00 ISBN: 1-55963-983-0, Paper: \$25.00 ISBN: 1-55963-984-9) is an analytically rigorous and historically informed assessment of this new movement. It examines the current state of community forestry through a grounded assessment of where it stands now and where it might go in the future. The book not only clarifies the state of the movement, but also suggests a trajectory and process for its continued development.

Mark Baker is research associate and **Jonathan Kusel** is founder and director of Forest Community Research, a nonprofit organization based in the Sierra Nevada of California, dedicated to advancing community well-being and community-based approaches to resource stewardship through research, education, and practice.

Advance Praise for *Community Forestry in the United States*:

“This book is a comprehensive and compelling analysis of the development, promises, and pitfalls of the community forestry movement. *Community Forestry in the United States* demonstrates convincingly the necessary links among sustainable forests, sustainable communities, and democratic governance.”

—**Hanna Cortner**, Ecological Restoration Institute, Northern Arizona University

“Baker and Kusel capture the richness, vitality, and challenge of community forestry, American forestry’s most significant breakthrough in a century. Their illumination of the community forestry movement—history, concept, strategy, and action—is unsurpassed. Their analysis of the movement’s critical issues will greatly accelerate problem-solving and coalescence with other movements that treat social justice and community capacity as keys to economic and environmental well-being.”

—**Jeff Romm**, Professor of resource and environmental policy, University of California, Berkeley
